

## Installation Instructions

### 4 x 1kg Granular Grease Digester – non-automated

#### General Information

Bio-Plus is a powdered formulation containing specially selected bacteria and enzymes to liquefy and digest grease.

#### Installation

1. Bio-Plus is most effective when used daily. Dosing should take place after all other kitchen cleaning has been carried out at the end of each day.
2. Simply pour 1-2 scoops of powder down the sink waste, replace plug and half fill sink with warm, **NOT HOT**, water. Then remove plug to flush powder through the system.

#### Maintenance

Your separator should be inspected regularly to ensure that the unit is working properly and that there is not an excessive build up of grease or sludge resulting from food waste. GMG Ltd recommend that this be carried out at least every quarter and that separators be cleaned out at least twice a year, more often if necessary. GMG Ltd are specialists in the servicing and maintenance of grease separators and are licenced to deal with both wet and 'difficult' waste in accordance with the 'Duty of Care'. Telephone GMG Ltd on 01926 432030 to discuss your servicing requirements.
